Miro Project Planning: Hunadi Sylviah Motubatse
Document Management : Location Github
Generating Insights
Data Presentation : canvas
Export Data for Deep Dive Analysis on Microsoft Excel
Create dashboard with Databrick
Data visualisation: Power BI continual reporting
Store processed Databricks Cataloqe
Data processing: use SQL on Databricks
Data source
Data Source: CSV file
ETL
create a database: workspace
create a schema : default
create a table: bright_coffee_shop_sales_3
Data ingestion: Databricks Cataloge
Get hour of day e.g 07:00
Get day of week e.g Friday
Get timestamp
Transaction time
Get name of month e,g June
Get day classification e.g weekend
Get day of week e.g Friday
Get day of month e.g Friday
Transaction date
Date & Time
Bright Coffee Shop
Quatintative Data
Transaction Quantity
Unit Price
Revenue = Transaction Quantity * Unit Price
COUNT number of row - Transaction ID column
COUNT number of rows-store ID column
COUNT number of row-product ID column
Transaction ID
Store ID
Product ID
ID'S
Categorial Data
Store Location
GROUP BY number of stores
Product Type
Get number SUM of products Type
Product Details
We can use were to differentiate the product
Product Category
Get number of UNIQUE product category
